SUMMARY

Computer Science Engineering student specializing in **Artificial Intelligence & Data Analytics** with hands-on experience in **AI agents, NLP, machine learning, RAG, REST APIs, and backend development**. Experienced in building AI-powered applications using **Python, Gemini, Google ADK, FastAPI, Flask, and Scikit-learn**. Interested in developing **production-ready AI agents, intelligent automation workflows, and LLM-powered business solutions**.

TECHNICAL SKILLS

Programming: Python, JavaScript, TypeScript, SQL
AI & Machine Learning: Generative AI, LLMs, AI Agents, NLP, RAG, Machine Learning, Predictive Analytics
AI Frameworks & Tools: Gemini, Google ADK, Sentence Transformers, FAISS, Scikit-learn, TensorFlow, PyTorch
Backend & APIs: FastAPI, Flask, Node.js, Express.js, REST APIs
Data & Databases: Pandas, NumPy, MongoDB, MySQL
Frontend: React.js, Next.js, Tailwind CSS
Tools & Platforms: Git, GitHub, Render, Vercel, cPanel

PROJECTS

AI SALES INTELLIGENCE AGENT *GitHub*

Python | Gemini | Google ADK | RAG | FastAPI | REST APIs

- Built an **AI-powered sales intelligence agent** using Gemini and Google ADK to support customer analysis, sales follow-ups, and business decision-making.
- Designed an **agentic workflow** for retrieving customer and business information from external systems through REST APIs.
- Developed **tool-calling workflows** enabling the agent to interact with external business systems using natural-language instructions.
- Built **FastAPI services** for backend integration, agent orchestration, and real-time communication between AI components and business applications.
- Implemented **validation, confidence handling, and human-escalation workflows** for uncertain or sensitive requests.

NARRATIVE ANALYTICS ENGINE *GitHub*

Python | Pandas | NumPy | Scikit-learn | Flask | Plotly

- Developed an analytics platform that converts **CSV and JSON datasets into automated analytical insights and visual narratives**.
- Built data preprocessing and analysis pipelines using **Pandas and NumPy** for structured data transformation and statistical analysis.
- Implemented **Linear Regression** for predictive analysis and **K-Means clustering** for pattern and segment discovery.
- Developed a **Flask REST API** for dataset processing, analysis, and model inference.
- Integrated interactive data visualizations using **Plotly and Chart.js** to communicate trends and analytical findings.
- Combined **descriptive, predictive, and prescriptive analytics** into a unified data-analysis workflow.

EDUCATION

B.Tech in Computer Science & Engineering 2023–2027

Specialization: Artificial Intelligence & Data Analytics Parul University, Vadodara, Gujarat

CERTIFICATIONS

AWS Academy Graduate — Cloud Foundations — AWS Academy
Full Stack Development — Coursera

ACHIEVEMENTS

Vadodara Hackathon 6.0 — Pre-Incubation Program
Selected for the **Pre-Incubation Program** and received **SSIP grant support** for startup development.
